QUOTE DETAILS

Good news from our site visit on 12/12/25: After thorough testing with an ARC soundbar for about an hour, I can confirm your Samsung TV's Audio Return Channel is working perfectly. No new HDMI cables needed – we tested using the existing cable and it performed flawlessly. This means we can proceed with a new amplifier that will give you single-remote control of volume and power.

The NBN technician couldn't get the fibre from the street to the house – this is a common issue that's now been escalated to NBN's civil team. The good news is we found a much neater path for the internal fibre routing, coming up from underneath the house through a void where an old air duct was. We managed to run the fibre all the way to the AV hub, so the internal work is complete. We're just waiting for the civil team to connect it at the pit (which couldn't be located on the day).

I'm recommending the **Yamaha RX-V6A** 7.2 channel amplifier. This is a significant upgrade from your old amp – it has a **powered Zone 2** which means you can run the TV area completely separately from the music speakers throughout the house. You'll be able to turn the extra speakers on and off from the app or remote without having to walk to the amplifier. Your old amp couldn't do this.

NBN FIBRE PROGRESS

What's Done

Internal fibre routing is complete. We found a neat path coming up from underneath the house through a void where an air duct used to be, running all the way to your AV hub. Much tidier than the original planned route.

What's Pending

NBN's civil team needs to connect the fibre from the street pit to the house. The pit couldn't be located on the day, so this has been escalated. This is a common issue – once the civil team completes their work, the internal fibre is ready to be connected and you'll be up and running.

RECOMMENDED AMPLIFIER

Yamaha RX-V6A 7.2 Channel Home Theatre AVR

This amplifier has proper **HDMI eARC** (Enhanced Audio Return Channel) which is the current specification for TV audio. It tested perfectly with your Samsung TV during our ARC soundbar testing, confirming compatibility.

Key Features

- **Powered Zone 2** – Run the TV area separately from the distributed music speakers. Turn the extra speakers on and off from the remote or app without walking to the amplifier
- **7.2 channels at 100W** – Main zone for proper surround sound, Zone 2 for distributed speakers throughout the property
- **Built-in streaming** – Spotify Connect, AirPlay, Bluetooth, and Yamaha MusicCast. No need for the old Sonos Connect anymore
- **HDMI eARC** – Single remote control for TV power, volume, and input switching
- **Dolby Atmos and DTS:X** – Modern surround sound formats for movies
- **WiFi and app control** – Control everything from your phone including Zone 2 speaker selection
- **DAB+ radio** – Built-in digital radio tuner

INTERNET OPTIONS

Option 1: Stay with Telstra

Once NBN's civil team completes the pit connection, you arrange activation with Telstra. We can be there to commission the equipment and get your Eero WiFi configured properly.

Option 2: Switch to Aussie Broadband

We're an Aussie Broadband enterprise reseller, which means we can handle the activation once the civil work is complete. The 500/50 Unlimited plan is \$110/month and includes **enterprise priority support** – faster response times and priority speeds during busy periods. Aussie Broadband also supply and support Eero WiFi systems, so your existing Eero units are a great match.

BEFORE WE START

- Let us know if you'd like to stay with Telstra or switch to Aussie Broadband once the civil work is complete
- Confirm you're happy with the Yamaha RX-V6A recommendation and we'll get pricing sorted
- Temporary setup still available: Connect to **Williamson_EXT** WiFi and look for "Denon" in Spotify

ASSUMPTIONS

- NBN civil team will complete pit connection (timeframe TBC by NBN)
- Existing speaker cabling throughout the property is in good condition
- Old Sonos Connect can be retired once new amplifier is installed
