## ADDITIONAL INFORMATION

### CUSTOMER DETAILS

**Job Number:** JN 3468 **Customer:** Tim Dring **Location:** 107 Barkers Road, Kew, VIC, 3101

### SUMMARY

This project involves relocating your existing networking and CCTV infrastructure to improve accessibility and system performance. We will move your network hub into the garage for better centralized access, extend multiple data cables throughout the property, and run all cable extensions hidden through roof spaces using professional conduit and trunking for a clean, concealed finish.

As part of this upgrade, we will replace your existing cameras with newer, higher-resolution models offering improved image quality, better night vision capability, and enhanced features for more effective security monitoring.

All cabling work will be completed using professional-grade Kordz Cat6 cabling, ensuring reliable performance and long-term durability for both your network and CCTV systems.

### MATERIALS

All data cabling will be completed using professional-grade Kordz Cat6 cabling. Kordz cables are specifically designed for demanding AV and security applications, offering superior shielding, better signal integrity, and longer lifespan compared to generic cabling.

Kordz PRO Series Cat6A Professional Cable

Learn more about why we use Kordz cabling: [Why Straight Forward Technology Uses Kordz Cabling Solutions](#)

- Kordz Professional Cat6/Cat6A Cabling for all network and CCTV runs
- Professional conduit and cable trunking for concealed installation
- Upgraded CCTV cameras (specific models to be confirmed)
- Network hub mounting hardware and accessories

### FREQUENTLY ASKED QUESTIONS

Q: How long will the installation take?

[View Answer](#)

A: The timeframe will depend on the total number of cable runs and camera relocations. We typically estimate 1-2 days for projects of this scope, but we'll provide a more accurate timeline once we finalize the full materials list.

Q: Will my existing cameras still work during the upgrade?

[View Answer](#)

A: There will be some downtime during the camera upgrade and cabling work. We'll coordinate the installation timing with you to minimize any security gaps and can schedule the work in phases if needed.

Q: Why use Kordz cabling instead of standard Cat6?

[View Answer](#)

A: Kordz cabling is professional-grade and specifically designed for demanding AV and security applications. It offers superior shielding, better signal integrity, and longer lifespan compared to generic cabling, reducing the risk of future issues and service calls.

## QUESTIONS FOR YOU

What are your preferred dates and times for the installation?

Answer

[? Save Answer](#)

[?? Delete Answer](#)

How many cameras are you looking to upgrade, and which locations are most important to you?

Answer

[? Save Answer](#)

[?? Delete Answer](#)

Do you have any specific requirements for the new cameras (e.g., color night vision, wide-angle coverage, audio recording)?

## ASSUMPTIONS

- Existing roof space and wall cavities are accessible for cable runs
- Power outlets are available within reasonable distance of new hub location in garage
- Existing mounting brackets and camera locations are suitable for new upgraded cameras
- Network equipment (NVR, switches) is compatible with relocated hub configuration
