ADDITIONAL INFORMATION

CUSTOMER DETAILS

Job Number: JN 3780 **Customer:** Gail Williams **Location:** 223 Reserve Road, Beaumaris, VIC 3193

SUMMARY

This quote is to **replace the faulty JODBF flush mount intercom station** at the front gate. The indoor monitor has been tested and is working correctly — it can view and hear the gate station, and successfully triggers the gate. The fault has been isolated to the **call button on the JODBF unit**.

We contacted **Aiphone directly** to explore repair options. While it is technically possible to replace the button and assembly, by the time parts and labour are factored in, a **complete station replacement** works out to be just as economical — and provides a brand new unit with full warranty coverage.

Installation includes **remounting the new station** into the existing custom frame alongside the Aiphone keypad and exit button, **reprogramming to the indoor monitor**, and applying a **protective electronics lacquer spray** to the rear terminals. Given the property's proximity to the beach, this lacquer helps protect against salt air corrosion and extends the lifespan of the installation.

MATERIALS

- 1x Aiphone JODBF Flush Mount Video Intercom Station

SITE SURVEY NOTES

The following observations were made during today's callout. These are not part of this quote, but are provided for your reference — things we could look at in the new year if of interest.

Alarm: Bosch Solution 6000 with MyAlarm iFob app. Worth confirming if connected via 4G or network-only — we recommend 4G for independent communication during internet or power outages.

CCTV: UniFi camera system installed throughout the property.

Network: UniFi Dream Router, UniFi Lite PoE Switch, and UniFi ceiling-mounted access points (one in pantry, likely more). Latitude 37 build with a quality technology installation overall. We noticed **4 SSIDs configured** — typically only 1 is needed. Multiple SSIDs can reduce performance and cause roaming issues between access points. Worth simplifying.

Internet: NBN HFC connection with Teltonika RUT240 4G modem for automatic failover if NBN drops out.

Power Protection: Equipment rack in garage with 2x UPS battery backups. We recommend replacing UPS batteries every 2-3 years — when these fail, they can take the entire system offline.

Gate: Sliding gate with magnetic reed switch alerting the alarm when open. Intercom in custom frame with Aiphone keypad and exit button.
