ADDITIONAL INFORMATION

CUSTOMER DETAILS

Customer: Derek Neilson **Location:** 12 Relph Avenue, Portsea, VIC 3944

QUOTE DETAILS

This project involves upgrading and optimizing your existing security and entertainment systems at your Portsea property. We will add **4G connectivity to your alarm system** for always-on monitoring and remote management capabilities, ensuring your property security is never compromised by internet outages.

We'll install a **TV antenna booster system** to improve reception quality across all TVs, and set up a **Wiim streaming device** in the study nook for your outdoor speakers. The Wiim connects directly to your existing speaker cables and works seamlessly with **AirPlay and Chromecast** – no special apps required, just use your phone or tablet.

As part of the handover process, we'll perform **complete factory resets** of your Hikvision camera system and intercom, unbinding them from previous accounts so you have full control. We'll also connect your **5G modem to the TP-Link network switch** for optimized network performance, set up AV and network connections for your entertainment equipment, and test the Fibaro controller to determine its current function.

Upon completion, you'll have a fully integrated smart home system with reliable security monitoring, improved entertainment options, and professional documentation of how everything works.

ALARM SYSTEM 4G UPGRADE

Always-On Connectivity

We will install a **4G module with SIM card** into your existing alarm system, providing **Control My Alarm (ifop)** connectivity. This ensures your alarm system maintains constant communication even if your internet connection fails, giving you peace of mind that your property is always protected.

Remote Management

- **Remote programming and troubleshooting** – we can adjust settings without visiting the property
- **PIN code management** – remotely change codes for the alarm and Bosch external keypad on the front door
- **Real-time alerts** – receive notifications instantly via the monitoring service
- **Professional monitoring ready** – system is configured for back-to-base monitoring if desired

TV & ENTERTAINMENT SETUP

TV Antenna Booster

🏢 Straight Forward Group Pty Ltd: ABN 78643385184.

Installation of a **professional TV antenna booster with dedicated power supply** to improve signal strength and reception quality across all televisions in the property. This eliminates pixelation and drop-outs, ensuring reliable free-to-air TV reception.

Wiim Streaming Audio

The **Wiim streaming device** will be discreetly installed in the bottom drawer of the study desk, connecting to your existing speaker cables for the outdoor speakers. Unlike proprietary systems like Sonos, the Wiim uses standard **AirPlay and Chromecast** protocols, so anyone can stream music from their phone without downloading special apps.

- **Universal compatibility** – works with iPhone, Android, Mac, PC
- **Multi-room capable** – can be expanded to other zones in future
- **High-quality audio streaming** – supports lossless formats
- **Simple operation** – just connect to WiFi and cast

[Learn more about Wiim Streaming Audio Solutions ?](#)

NETWORK & SYSTEM INTEGRATION

5G Modem Connection

We'll relocate your **5G modem from behind the TV** and connect it properly to your existing **TP-Link data switch** using professional network cabling. This provides a stable wired connection for optimal performance and eliminates potential WiFi interference issues.

AV & Network Setup

Connection of **PlayStation consoles and AV equipment** to the network using professional cabling for the best gaming and entertainment experience with minimal latency and maximum reliability. All connections use quality cables and proper cable management for a clean, professional installation.

Camera & Intercom Factory Resets

Complete factory reset and reconfiguration of your **HIKvision camera system and gate intercom**, unbinding them from any previous Hik-Connect accounts. This ensures you have full administrative control and no legacy access remains. The camera system provides comprehensive property surveillance, while the intercom at the gate provides secure visitor management.

Fibaro Controller Assessment

We'll test the existing **Fibaro home automation controller** to determine if it's actively controlling lights or other systems, or if it's been decommissioned. This helps you understand what smart home functionality is currently operational and we'll advise on its current status.

MATERIALS

- 4G Module (ifop Control My Alarm) with SIM card
- TV Antenna Booster with power supply
- [Wiim Streaming Device](#)
- Professional cabling and connection accessories (network cables, AV cables, connectors, wallplates, adapters)

ASSUMPTIONS

- Existing alarm system is compatible with 4G module installation
- Power outlets available near all equipment installation locations
- TV antenna is in good condition and properly mounted
- Existing speaker cables in study nook are functional
- TP-Link data switch has available ports for new connections
- HIKvision camera system and intercom are operational and just need account reset
- Standard access to all equipment locations during business hours
- WiFi access point assessment will be conducted on-site after cable testing – not included in this quote
